

Share

Example

TypeScript

JavaScript

Example

^ Expo

```
import React from 'react';
import {Alert, Share, View, Button} from 'react-native';

const ShareExample = () => {
  const onShare = async () => {
    try {
      const result = await Share.share({
        message:
          'React Native | A framework for building native apps using
React',
      });
      if (result.action === Share.sharedAction) {
        if (result.activityType) {
          // shared with activity type of result.activityType
        } else {
          // shared
        }
      } else if (result.action === Share.dismissedAction) {
        // dismissed
      }
    } catch (error: any) {
      Alert.alert(error.message);
    }
  };
  return (
    <View style={{marginTop: 50}}>

Reference

Methods

share()

```
static share(content: ShareContent, options?: ShareOptions);
```

Open a dialog to share text content.

In iOS, returns a Promise which will be invoked with an object containing `action` and `activityType`. If the user dismissed the dialog, the Promise will still be resolved with `action` being `Share.dismissedAction` and all the other keys being undefined. Note that some share options will not appear or work on the iOS simulator.

In Android, returns a Promise which will always be resolved with `action` being `Share.sharedAction`.

Properties:

NAME	TYPE	DESCRIPTION
content Required	object	message - a message to share url - a URL to share ◀ iOS title - title of the message ▶ Android At least one of <code>url</code> and <code>message</code> is required.
options	object	dialogTitle ▶ Android excludedActivityTypes ◀ iOS subject - a subject to share via email ◀ iOS tintColor ◀ iOS anchor - the node to which the action sheet should be anchored (used for iPad) ◀ iOS

Properties

sharedAction

```
static sharedAction: 'sharedAction';
```

The content was successfully shared.

dismissedAction ◀ iOS

```
static dismissedAction: 'dismissedAction';
```

The dialog has been dismissed.
