

# DevSettings

The `DevSettings` module exposes methods for customizing settings for developers in development.

## Reference

### Methods

#### `addItem()`

```
static addItem(title: string, handler: () => any);
```

Add a custom menu item to the Dev Menu.

#### Parameters:

NAME	TYPE
title <span>Required</span>	string
handler <span>Required</span>	function

#### Example:

```
DevSettings.addItem('Show Secret Dev Screen', () => {  
  Alert.alert('Showing secret dev screen!');  
});
```

#### `reload()`

```
static reload(reason?: string): void;
```

Reload the application. Can be invoked directly or on user interaction.

### Example:

```
<Button title="Reload" onPress={() => DevSettings.reload()} />
```
