

Vibration

Vibration is described as a pattern of on-off pulses, which may be of varying lengths.

The vibration pattern may consist of either a single integer, describing the number of milliseconds to vibrate, or an array of integers describing a pattern of vibrations and pauses. Vibration is controlled with a single method: **Vibration.vibrate()**.

```
import { Vibration } from 'react-native';
```

API

Static methods

cancel: () => void

Stop the vibration

vibrate: (number | Array<number>) => void

Start the vibration pattern
