1. OrderedList item 1
2. OrderedList item 2
3. OrderedList item 3

```
<OrderedList>
  <OrderedList.Item>OrderedList item 1</OrderedList.Item>
  <OrderedList.Item>OrderedList item 2</OrderedList.Item>
  <OrderedList.Item>OrderedList item 3</OrderedList.Item>
</OrderedList>
```

## Introduction

OrderedList component displays an ordered list.

[Follow the appropriate instructions](#) to add this component in to your app.

## Guidance

- Use OrderedList to display a semantic ordered list ( `ol` ) on web using defaults for styling.
- `title` prop can be used to display a list item heading above the children
- Use `start` prop to specify the number to start the list with
- OrderedList item also accepts `Typography` or any other children components

## With headings

Use `title` prop to render a list item heading above the content of the item:

1. **Heading 1**

```

    OrderedList item 1
2. Heading 2
    OrderedList item 2
3. Heading 3
    OrderedList item 3

<OrderedList>
  <OrderedList.Item title="Heading 1">OrderedList item
1</OrderedList.Item>
  <OrderedList.Item title="Heading 2">OrderedList item
2</OrderedList.Item>
  <OrderedList.Item title="Heading 3">OrderedList item
3</OrderedList.Item>
</OrderedList>
```

Accessibility

OrderedList and OrderedList.Item adopt the semantics of `ol` and `li` respectively.
