

# Migrating to the New Architecture

## CAUTION

This documentation is still **experimental** and details are subject to changes as we iterate. Feel free to share your feedback on the [discussion inside the working group](#) for this page.

Moreover, it contains several **manual steps**. Please note that this won't be representative of the final developer experience once the New Architecture is stable. We're working on tools, templates and libraries to help you get started fast on the New Architecture, without having to go through the whole setup.

## Getting Started with the New Architecture

This migration guide is designed for React Native **library authors** and **application developers**. It outlines the steps you need to follow to roll out the new Architecture, composed of the **new NativeModule system (Turbo Module)** and the **new Renderer (Fabric)** to your **Android** and **iOS** libraries and apps.

## Table of Contents

The guide is divided into five sections:

- **Supporting the New Architecture in your Library**
  - [Prerequisites for Supporting the New Architecture in JavaScript](#)
  - [Enabling the New Architecture in your Library](#)
    - [Android](#)
    - [iOS](#)
- **Supporting the New Architecture in your App**
  - [Prerequisites for Supporting the New Architecture in your App](#)
- **[React 18 & React Native](#)**
- **[Troubleshooting](#)**

- **Appendix**
