App transfers

An overview of transferring the ownership of an app to a different entity.

There are two different representations of your app to consider when handing over ownership to another entity: the app as it exists on Expo Application Services (to create builds with EAS Build, send updates with EAS Update, and so on) and the app records on the app stores (to distribute the app to end-users). The following guides explain how to handle app transfers in each case.

EAS project transfers

Transfer an EAS project to a different Expo account. →

Google project transfers

Transfer an Android app to a different Google Play developer account. ↗

Apple project transfers

Transfer an iOS app to a different Apple Developer account. ↗
