# Modals

Learn how to use modals in Expo Router.

Modals are a common pattern in mobile apps. They are a way to present a new screen on top of the current screen. They are often used for things like creating a new account, or for a user to select an option from a list.

You can implement a modal by creating a root layout route that renders certain routes as modals.

```
app
├── _layout.js
└── home.js
```
