

Separator

Cross-platform

A separator visually separates content into groups.

You can render content in the separator by specifying the component's children. The component's children can be plain text or a component like Icon. The content is center-aligned by default.

Usage Guidelines

[Link example](#)

Example usage (from [SeparatorTest.tsx](#))

```
import * as React from 'react';
import { Button, Separator, Text } from '@fluentui/react-native';
import { View, StyleSheet } from 'react-native';

const BlueSeparator = Separator.customize({ tokens: { color: 'blue' } });
const RedSeparator = Separator.customize({ tokens: { color: 'red' } });

const App = () => {
  return (
    <View style={styles.stackStyle} gap={5}>
      <View gap={4} style={styles.separatorStackStyle}>
        <Button content="Button4" />
        <BlueSeparator vertical />
        <Button content="Button5" />
        <RedSeparator vertical />
        <Button content="Button6" />
      </Separator />
    </View>
  );
};
```

Implementation

ISeparatorPropTokens interface

Name	Type	Default value	Description
vertical	boolean	false	Specifies whether the separator is vertical or horizontal. If true, then it's vertical.
