Tutorial: Create a module with a config plugin

A
tutorial
on
creating
a native
module
with a
config
plugin
using
Expo
modules
API.

Config
plugins
allow
you to
customize
native
Android
and iOS
projects

On this page

1. Initialize a module
2. Set up our workspace
3. Run the example project
4. Creating a new config plugin
5. Reading native values from the module
6. Running your module
