

# Animated

Animated focuses on declarative relationships between inputs and outputs, configurable transforms in between, and start/stop methods to control time-based animation execution.

This API is the same JavaScript implementation as found in React Native. Please refer to the React Native documentation below:

[Animated](#)

**Warning!** The React Native animation API is not optimized for the web. You may prefer to use external modules that are designed for multi-platform animations and provide better performance, e.g., [React Spring](#).
