

Version: 3.x

withDelay

`withDelay` is an animation modifier that lets you start an animation with a delay.

Reference

```
import { withDelay } from 'react-native-reanimated';

function App() {
  sv.value = withDelay(500, withTiming(0));
  // ...
}
```

▼ Type definitions

Arguments

`delayMs`

Duration (in milliseconds) before the animation starts.

`delayedAnimation`

Animation to delay.

`reduceMotion` Optional

A parameter that determines how the animation responds to the device's reduced motion accessibility setting.

Returns

withDelay returns an [animation object](#). It can be either assigned directly to a [shared value](#) or can be used as a value for a style object returned from [useAnimatedStyle](#).
