EAS Insights

An introduction to EAS Insights which is a preview service for projects using the expo-insights library.

 EAS Insights is in preview and subject to breaking changes. While in preview, it is free to use.

EAS Insights is a service that will offer a view into a project's performance, usage, and reach. We are currently offering a preview of Insights that is available to all developers, and we will continue to roll out new features and functionality based on user feedback and suggestions.

EAS Insights makes it easy to see the state of your app, providing information about usage across platforms, app store versions, and timeframes.

Integration with EAS Update

If you're already using [EAS Update](#), we provide certain high-level usage insights without any additional client-side changes. This is possible because by aggregating data from client requests to check for an update into a limited Insights view that shows usage over time, as well as usage broken down by platform.
