Version: 3.x

# cancelAnimation

cancel Animation lets you cancel a running animation paired to a shared value.

### Reference

```
import { cancelAnimation } from 'react-native-reanimated';

function App() {
  const offset = useSharedValue(100);

  const handleCancel = () => {
    cancelAnimation(offset);
  };
}
```

Type definitions

## **Arguments**

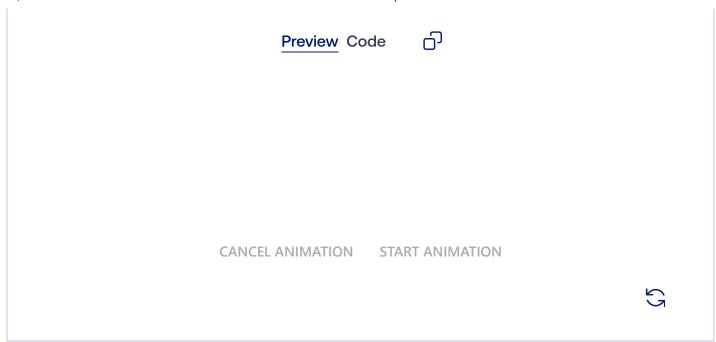

sharedValue

The shared value of a running animation that you want to cancel. If no animation is running, the cancelAnimation function does nothing.

#### **Returns**

cancelAnimation returns undefined.

## **Example**

### **Remarks**

• You can resume the animation by assigning the same animation (i.e. withSpring, withTiming) to the shared value again.
