EAS Build

EAS Build is a hosted service for building app
binaries for your Expo and React Native
projects.

EAS Build is a hosted service for building app
binaries for your Expo and React Native
projects.

It makes building your apps for distribution
simple and easy to automate by providing
defaults that work well for Expo and React
Native projects out of the box, and by
handling your app signing credentials for you
(if you wish). It also makes sharing builds with
your team easier than ever with [internal
distribution](#) (using ad hoc and/or enterprise
"universal" provisioning), deeply integrates
with EAS Submit for app store submissions,
and has first-class support for the
`expo-updates` library.

It's designed to work for any native project,
whether or not you also use the managed
workflow. It's the fastest way to get from
`npx create-expo-app` or
`npx react-native init` to app stores.

Get started

Creating your first build
It should only take a few minutes in
total to get up and running for iOS   →
