Top-level src directory

Learn how to use a top-level src directory in your Expo Router project.

As your project grows, it can be helpful to move all of the directories containing application code into a single **src** directory. Expo Router supports this out of the box.

```
📁 src
   📁 app
      ▤ _layout.js
      ▣ index.js
   📁 components
      ▣ button.js
   ▣ package.json
```

Simply move your **app** directory to **src/app** and restart the development server with a clear cache:

```
>_ Terminal

- npx expo start --clear

# Or when exporting
- npx expo export --clear
```

Notes:

- The config files (**app.config.js**, **app.json**, **package.json**, **metro.config.js**,
