Nesting navigators

Learn how to nest navigators in Expo Router.

> ℹ This guide is an extension from React Navigation: Nesting navigators to Expo Router.

> ⚠ Navigation UI elements (Link, Tabs, Stack) may move out of the Expo Router library in the future.

Consider the following file structure which is used as an example in this guide:

```
📁 app
   ▦ _layout.js
   ⟨⟩ index.js
   📁 home
      ▦ _layout.js
      ⟨⟩ feed.js
      ⟨⟩ messages.js
```

In the above example, **app/home/feed.js** matches `/home/feed`, and **app/home/messages.js** matches `/home/messages`.

▦ app/_layout.js	📋 Copy

```
import { Stack } from 'expo-router';
```
