📚 Reference

🎓 Learn

Build schema for eas.json

Migrate from "expo build"

Build lifecycle hooks

Use private npm packages

Use Git Submodules

Use npm cache with Yarn Classic

Set up EAS Build with a monorepo

Environment variables and secrets

Build APKs for Android Emulators and devices

Build for iOS Simulators

App version management

Troubleshoot build errors and crashes

Install app variants on the same device

iOS Capabilities

Run builds on your own infrastructure

Cache dependencies

Android build process

Environm variables and secre in EAS Bu

Learn how to use environment variables and secrets in an EAS Build.

The Environment variables in Expo guide describes how to use .env files to set environment variables that can be inlined

📄 **On this page**

Setting plaintext environment variables in eas.json

    For use in application code

    For use by your Expo config

    For use by other build steps

Built-in environment variables

Using secrets in environment variables

    Secrets on the Expo website

    Adding secrets with EAS CLI

    Importing secrets from a dotenv file

    Accessing secrets in EAS Build

Common questions

    Can EAS Build use .env files?

    How do I share environment variables between my local development environment, EAS Update, and EAS Build?

    How are naming collisions between secrets, the env field in eas.json , and .env files handled?

    How do environment variables work for my Expo Development Client builds?

    Can I just set my environment variables on a CI provider?

    How to upload a secret file and use it in my app config?
