Modal

A basic way to present content above an enclosing view. Modals may be nested within other Modals.

```
import { Modal } from 'react-native';

<Modal {...props}>{children}</Modal>;
```

API

Props

animationType: ?("fade" | "none" | "slide")

Default is `"none"`. This can be used to add an animation to the modal being opened or closed.

children: ?any

The children of a `Modal` element will be hidden or shown depending on the modal visibility.

onDismiss: ?() => void

Called after the modal has been dismissed and is no longer visible.

onRequestClose: ?() => void

Called when the user is attempting to close the modal like when they hit `Escape`. Only the top-most Modal responds to hitting `Escape`.

onShow: ?() => void

Called after the modal has been shown and may be visible.

transparent: ?boolean = false

Determines if the modal is rendered with a transparent backdrop or a white backdrop

visible: ?boolean = true

> Determines if the modal and its content is rendered.
