Authentication

Learn about setting up authentication in your Expo project.

Expo can be used to login to many popular providers on iOS, Android, and web. `expo-auth-session` package allows browser-based authentication (using OAuth or OpenID Connect) to your project for Android, iOS, and the web. You can also implement authentication using native libraries for third-party providers with development builds.

📖 **AuthSession API**
`expo-auth-session` is the easiest way to add web browser-based authentication (for example, browser-based OAuth flows) to your app. →

📖 **Google authentication**
A guide on using `@react-native-google-signin/google-signin` library to integrate Google authentication in your Expo project. →

📖 **Facebook authentication**
A guide on using `react-native-fbsdk-next`
library to integrate Facebook →
