useWindowDimensions

Respond to window size changes from the `Dimensions` module.

`useWindowDimensions` automatically updates `width` and `height` values when viewport size changes.

```
import { useWindowDimensions } from 'react-native';
const { height, scale, width } = useWindowDimensions();
```

API

Return value

`useWindowDimensions` returns the `window` dimension object.

> **height**: number
> The height in pixels of the app viewport.

> **scale**: number
> The pixel ratio of the device your app is running on.

> **width**: number
> The width in pixels of the app viewport.
