TELUS Component Library

BaseProvider

Multi-Platform Component

```
<BaseProvider defaultTheme={myTheme}>
  <Typography>Hello world</Typography>
</BaseProvider>
```

Introduction

```
import { BaseProvider } from '@telus-uds/components-base'
```

[Follow the appropriate instructions](#) to add this component in to your app.

Guidance

BaseProvider is the root provider for UDS Base components. You must wrap all base components in a `BaseProvider`. We recommend using a single BaseProvider component near the root of your application. BaseProvider takes a required `defaultTheme` prop which must be a UDS theme with a matching theme schema version to the version of the base components that you are using. BaseProvider wraps all other UDS providers so unless you have a particularly custom use case you should only use the BaseProvider.

Props

Name	Type	Platform	Default	Description
children*	node	standard		
defaultTheme	custom	standard		
themeOptions	shape	standard
