TELUS Component Library

InputLabel

Multi-Platform Component | [Figma UI KIT](#)

Input label Short hint ❓

```
<InputLabel
  label="Input label"
  hint="Short hint"
  hintPosition="inline"
  tooltip="This is the tooltip's content"
/>
```

Introduction

`InputLabel` is typically used as part of an input component, but it can also be used separately, or in combination with custom form elements.

[Follow the appropriate instructions](#) to add this component in to your app.

Accessibility

Make sure to pass the `forId` and `hintId` props, and use the `hintId` identifiers for labelling the input (`aria-labelledby`). The `forId` prop will bind the label to the input, keeping the label inaccessible (avoiding a double screenreader's focus on the same label).

Platform considerations

The component is available on both native platforms and web.

> ⓘ **INFO**
>
> On Native the aria attributes are replaced with the `accessibilityHint` prop.

Props

Name	Type	Platform	Default	Description
copy	'en' | 'fr'	standard	'en'	Whether the English or French copy will be used (e.g. for accessibility labels).
hintPosition	'inline' | 'below'	standard	'inline'	Position of the hint relative to label. Use `below` to display a larger hint below the label.
label*	string	standard		The input label.
forId	string	standard		The id attribute of the input which this label refers to.
hint	string	standard		A short description of the expected input.
hintId	string	standard		The id attribute passed down to the hint element.
tooltip	string	standard		Content of an optional `Tooltip`. If set, a tooltip button will be shown next to the label.
tokens	tokens	standard		System tokens prop, see tokens for more

Name	Type	Platform	Default	Description
				details
variant	variant	standard		System variant prop, see variants for more details

Tokens

In exceptional circumstances, the following tokens can be passed to this component to override its default styles. **Do not do this unless absolutely necessary.** Read more about overriding styles.
