🏠   API reference   Gesture Handlers   NativeView

Version: 2.6.0 – 2.12.0

NativeViewGestureHandler

> 🔥 **DANGER**
>
> Consider using the new gestures API instead. The old API is not actively supported and is not receiving the new features. Check out RNGH 2.0 section in Introduction for more information.

A gesture handler that allows other touch handling components to participate in RNGH's gesture system.

Used by `createNativeWrapper()`.

Properties

See set of properties inherited from base handler class. Below is a list of properties specific to `NativeViewGestureHandler` component:

`shouldActivateOnStart` (Android only)

When `true`, underlying handler will activate unconditionally when in `BEGAN` or `UNDETERMINED` state.

`disallowInterruption`

When `true`, cancels all other gesture handlers when this `NativeViewGestureHandler` receives an `ACTIVE` state event.
